

## 1ATT CAST SHADOW SIGN-OFF

This unique Price Grade 3 paint breaks the stigma of (im)perfections in materiality by proudly displaying the rawness of metal and celebrating the craftsmanship and markings found in manufacturing. Industrial beauty marks shown in raw materials work together with the coating to highlight the depth and dimension of our products.

This subtly tinted clear-coat allows for color range, variability, and uniqueness across parts and products. Weld marks, fingerprints, anodized streaks - and even color haze or shift - should be expected and celebrated.

There will be variation in manufacturing marks from product to product and sample to samples.

# 1ATT CAST SHADOW SIGN-OFF

Due to variation in final product, please consider the following before signing below:

- 1ATT is a tinted clear coat which allows the uniqueness of the metal to be visible. Because of this, color range and varilability across parts and products should be expected. Not one product or part will be the same.
- Weld marks, fingerprints, anodized streaks and color haze will occur with this finish.
- Clear coat finishes will age when exposed to light, resulting in a color shift.

By signing below, you are acknowledging that the variations that occur with this finish are part of the design intent and are not product defects.

If this accurately captures your understanding, please sign below and return a copy of this letter to Steelcase.
