Campers & Dens seamlessly blends different applications together.

3.0 Materiality Inspiration

Portraying the versatile range of looks Campers & Dens offers through diverse materiality options.

4.0 Materiality Specification

Understanding which materials are available on the various components of Campers & Dens

Introduction

What makes Campers & Dens unique?

Its 5 layers of privacy redefine the workspace by enabling people to navigate by natural intuition without enforced rules.

Campers & Dens is a technologically advanced solution with integrated power, lighting, a globally patented fail-open roof system, ventilation and acoustical privacy built in.

Campers & Dens invites avenues over corridors. Creating inspiring circulation paths rather than mundane straight routes.

What employees want most

Wellbeing and privacy are closely connected needs in today's workplace.

#1

Privacy

#2

Spaces that support wellbeing

#3

Hybrid collaboration spaces

#4

Easy access to power

#5

Individual enclaves with technology

The Power of Privacy

Privacy
continues to be
the leading
priority for
employees.

60%

Of workers say privacy has become
somewhat or much more important
than a year ago.

“People need a
range of privacy
solutions
everyone can
access to give
people more
control over the
stimulation
around them
based on the
cognitive
demands of what
they’re doing.”

Andrada Iosif
*Steelcase WorkSpace
Futures Researcher*

Typologies & Applications

Collaborative

Hybrid Conference Meeting Room
Informal Collaboration Area

Collaborative

Hybrid Conference Meeting Room

- Campers & Dens' monitor bracket option makes it possible to support integrated meeting room technology within the Camper.
- Whether the Camper holds a conference table with chairs or a comfy lounge inside, it offers an inviting space to gather for productive meetings.

Informal Collaboration Area

- By introducing an awning, a layer of privacy is created beyond the Camper itself, offering a comforting feeling and a hint of visual privacy.
- Utilize the whiteboard laminate material option in these areas to enhance brainstorming and idea sharing, as well as encourage an interactive discussion.
- Consider adding Campers & Dens near the entrance of a building to allow visitors/clients a meeting space in a more public area.

Social

Lounge Area

Lounge Area

- Campers & Dens' accessories provide a variety of ways to create semi-private spaces that encourage socialization.
- Consider adding a Cabin onto the back of the Camper to create a cozy nook that provides a place to escape.
 - The interior fabric panels in the Cabin absorb reverberations, making the space more acoustically private and comfortable.
 - The Cabins have a solid roof and slatted roof option as well as a light option, to help brighten the space.
- Consider adding an Awning to create a social space that offers both visual and psychological privacy. This accessory creates an environment for people to socialize casually, while also maintaining a sense of security.

Personal

Workstations
Private Office

Workstations

- Consider using a Cabin on the larger size Camper (CD05) to create touchdown areas with flexible workstations.
 - Cabins are an added layer that provide sanctuary in the middle of an open plan.
 - The semi-private touchdown space is nice for employees who don't have an assigned desk or are looking for a change of scenery throughout the day.
- Providing touchdown spaces empowers and enables people to choose environments that best suit their needs and preferences.
- Adding a monitor is essential to ensure people can share/display information as needed.
- For additional user privacy, place a privacy screen between the two workstations.

Private Office

- The Camper's integrated lighting, ventilation, and roof modes ensure the user has choices available to support them throughout the entire day.
- Place the entrance of the Camper facing away from the workstations or add screens for additional privacy.
- Using the Hackings can also create an added layer of privacy while elevating the Camper's appearance.
- This application is not limited to owned Private Offices. Consider utilizing Campers & Dens for shared/touchdown offices, as well as reservable spaces!

Learning

Faculty Office

Student Commons

Student Commons

- The Camper solves a variety of students' needs in open common areas. Enclosed privacy is ideal for individual study sessions, collaborative project teamwork, and interactive meetings without distractions.
- Positioning a Cabin near a wall or window provides another layer of privacy in the open with the benefits of natural daylighting.
- Utilize the outsides of the Camper with different functions to create collaborative “dens”.
- Adding a monitor to any of the side walls helps enable more effective sharing, collaboration, co-development of work.

Faculty Space

- Campers & Dens' versatility enables faculty to have both a private office and a shielded meeting room within an open plan area.
- This application can serve as an owned office or a shared faculty space anywhere on campus.
- The Camper is perfect for balancing quiet focus and private meetings, and privacy glass films help achieve the desired level of visibility.
- During office hours, students feel comfortable with the blend of visibility and confidentiality.
- The exterior sides of the Camper create a semi-private area where faculty can meet with colleagues or interact with a group of students.
- The extensive range of materiality offered on Campers & Dens helps faculty and facilities to create the brand of the school and the preferences of staff.

Rejuvenation

Respite Room

Respite Room

- Respite spaces support mental wellbeing by providing an area for people to take a short break, unwind, and reduce stress.
- Consider adding the Kink to create a more inviting feel.
- The visual and acoustical privacy offered by the Camper is ideal for a rejuvenation space, where enclosed privacy is critical.
- Placing the entrance facing towards a window or wall creates additional privacy.
 - A window to nature and the outdoors helps bring biophilic elements inside the workplace.
- Adding a frosted film to the glass is another great option to enhance the user's experience. The added layer of privacy can help make the space feel more secure.

Blended Applications

Campers & Dens' versatility allows for the creation of various typologies within one cohesive space. From Hybrid Collaboration Meeting Rooms to Respite Areas, its thoughtful design effortlessly accommodates for different needs in a single environment.
