

CF Series Arms

Applications Guide

Adjustability

CF Series monitor arms are available in dynamic and static styles to fit different types of work. Both styles offer focal, tilt and panning adjustability, while user height adjustability is primarily a feature of dynamic arms. Static arms are ideal for individual workstations and observational work, such as in healthcare or security, where vertical height adjustability is not in high demand. Static arm height adjusts in 1" increments by moving the collar clip up or down.

Adjustable Arm Assemblies

One style number includes everything needed to attach monitors to monitor arms. Arms, connectors, brackets and mounts are included when assemblies are specified. Arms are shown with desk-clamp/through-mount/grommet bracket. Additional bracket options include Bivi, c:scape and FrameOne. Bivi brace is required when Bivi bracket is specified. See the *Turnstone Specification Guide*.

Note: Only single and dual flat-panel arm applications are permitted for use with two-leg height-adjustable desks.

DYNAMIC ARM ASSEMBLIES

STATIC ARM ASSEMBLIES

Note: Wide dual and triple static arm assemblies are available with longer arm extensions for use with larger monitors. See the Steelcase Worktools Specification Guide.
