

Steelcase

Steelcase Universal Modular Power System

Technology is everywhere, but outlets aren't... and everybody needs a place to plug in. Steelcase Universal Modular Power System activates spaces with convenient power at desks and around shared tables – wherever outlets are in high demand. Just a single standard outlet can power the entire system to charge devices and support power access for multiple users. No electrician or hardwiring is needed.

Features and Benefits

Easy access choices

Pick your power play. Universal Modular Power provides powerstrips and under worksurface utility power for plug-and-play access above and below the desktop, including powering height-adjustable desks. An optional curly cord allows for independent changes in desk heights, while an assortment of modular power component parts lets you optimize for different surface sizes and configurations.

Share the power

Make power outlets, USB-A and USB-C ports easy for teams to find and use in almost any space. Universal Modular Power can extend up to 50 feet, subject to local restrictions. The system distributes 15 amps over a single circuit and can split in two directions as needed to serve up to eight individuals around a table or up to six users at fixed height or adjustable desks.
